

## Essential Micro-Processes at Comminution at Single Particle Stressing

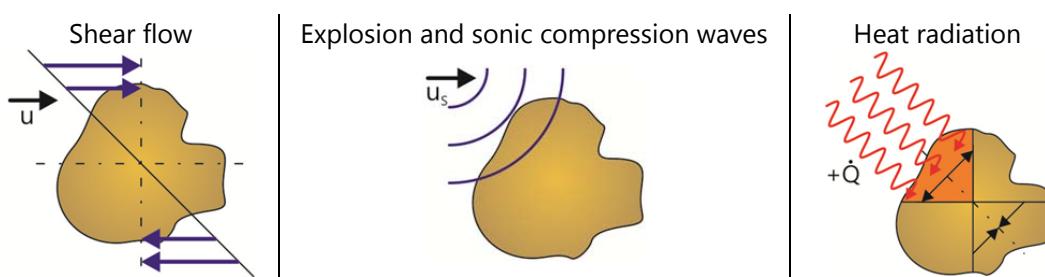

- Single particle stressing between two rigid, smooth or profiled surfaces (under constraint due to stressing tools)

- Single particle stressing at single rigid, smooth or profiled surface

- Single particle stressing by surrounding fluid or radiation (without direct contact to rigid surfaces)

$F_N, F_T, F_S, F_Z$  – normal, tangential, shear, tension force;  $v, u$  – loading, fluid velocity;  $\dot{Q}$  – heat flow
